

Recording Available: From Vision to Reality — 6 Years of RDCA-DAP, Driving Drug Development Solutions and Innovations in Data Sharing

Over the past six years, RDCA-DAP has built a foundation for progress by:

- Promoting **data sharing** to expand a growing, open-access rare disease database
- Fostering a **collaborative data ecosystem** with external partnering platforms
- Supporting **drug development** through our public data and analytics portal

This webinar, hosted by C-Path's Rare/Orphan and Pediatric Disease team on Thursday, December 11, at noon ET, demonstrated how **data sharing can move mountains** for rare disease research — with real-world examples of data-driven solutions and collaborative task forces that address unmet needs, streamline development, and advance regulatory-grade tools.

The presentation concluded with a **panel discussion** featuring diverse stakeholders sharing their perspectives on why data sharing remains essential to progress in rare diseases.

Don't miss this opportunity to see how collaboration and shared data are shaping the future of rare disease drug development.
