CRITICAL PATH INSTITUTE

Biomarkers of Crohn's Disease to Support the Development of New Therapeutic Interventions

C-Path's Crohn's Disease Biomarkers Pre-Consortium funded by The Helmsley Charitable Trust is proud to announce its first publication in the journal Inflammatory Bowel Diseases titled, "Biomarkers of Crohn's Disease to Support the Development of New Therapeutic Interventions." The result of collaboration among experts in Crohn's disease, including academia, health care institutes, foundations, public advocacy groups, industry and regulatory bodies, this work has identified biomarkers that can be used as drug development tools to advance clinical trials in IBD and potentially improve patient care.
