The Patient-Reported Outcome (PRO) Consortium is a public-private partnership established by the Critical Path Institute (C-Path) in cooperation with the U.S. Food and Drug Administration (FDA) and the medical products industry in 2008. The PRO Consortium brings together scientists from C-Path, industry, academia, and regulatory agencies in a pre-competitive environment for the purpose of developing, evaluating, and qualifying PRO instruments for use as primary or secondary endpoint measures in clinical trials designed to evaluate treatment benefit.

On April 24-25, 2013 the **FOURTH ANNUAL PATIENT-REPORTED OUTCOME CONSORTIUM WORKSHOP** was held in Silver Spring, Maryland. The overall Workshop objectives were to:

- Provide updates on the ongoing PRO instrument qualification activities within the PRO Consortium's working groups
- Describe the status of the FDA's drug development tool (e.g., PRO instrument) qualification program
- Discuss the use of a mixed methods approach (i.e., qualitative and quantitative research) to ensure content validity during the PRO instrument development process
- Explore the implications of the reauthorized Prescription Drug User Fee Act (PDUFA V) on the role of patients in the drug development process
- Discuss the critical need for well-defined and reliable clinical outcome assessment tools for pediatric clinical trials
- Examine challenges and best practices in the implementation of electronic PRO data collection (ePRO) in clinical trials
- Discuss the selection of the appropriate recall period for PRO endpoint measures
- Explore the role of PRO endpoints in oncology trials

The following Workshop Agenda provides an overview of the day-and-a-half-long meeting as well as links to the slide sets and posters presented.
