

RDCA-DAP Responsive Curation Levels – Dr. Ramona Walls

This was presented as part of the RDCA-DAP monthly steering committee meeting, on April 12, 2022. It describes the 8 curation levels used in RDCA-DAP, from raw ingest to mapped to OMOP CDM to fully integrated with ontologies. It explains how our responsive curation process supports FAIR data by sharing metadata as quickly as possible, to make data Findable, then successfully makes the data more Accessible, Interoperable, and Reusable based on demand for the data.
