Rick Liwski

Richard Liwski is the Chief Technology Officer and Director of Critical Path Institute’s Data Collaboration Center. He is responsible for aligning C-Path’s Technology strategy with the organization’s goals, for the architecture and development oversight of data sharing initiatives in support of C-Path consortia and for the data curation, management and standardization activities to support all of the Data Collaboration Center projects. In addition, Richard is responsible for the development and implementation of partnership projects with the Clinical Data Interchange Standards Consortium (CDISC). He also serves as C-Path’s Chief Privacy Officer, responsible for the definition, implementation, training and monitoring of C-Path’s policies for handling of clinical data.

Richard joined C-Path in 2014. Prior to C-Path, he spent 26 years at IBM that included roles in storage product development, functional area management, program management, brand/marketing management and customer relationship management. His experience included assignments working with a major US pharmaceutical companies and healthcare providers as the technical focal point for their data storage needs.

Mr. Liwski received his Bachelor of Science degree in electrical engineering from New Mexico State University.
