

INC COMMUNICATIONS TOOLKIT FOR NURSES

Last Updated October 2021

How to Use this Guide

The key messages, logos, one pagers and social graphics contained or linked in this guide are intended to be used **as is** to keep messages about INC and its topics, i.e., NAESS, long-term outcomes, neonatal seizures, etc. consistent. If you'd like to make modifications, please email incinfo@c-path.org with your requests/ideas.

The sample social copy included in the **Social Toolkits** can be modified to be written in your "voice" as needed. Please reach out with any questions. Thank you.

Challenge

The last drug that significantly impacted survival in preterm neonates was approved more than 30 years ago and, to this day, neonates continue to be treated as therapeutic orphans, underserved by the drug development community and continually lacking safe and effective therapies. Currently, less than one percent of registered trials are in neonates and the vast majority of drugs – approximately 60 to 90 percent – in this population are used off-label, greatly impacting any objective evaluation of their safety and efficacy. Providing much needed treatments for this neglected subset of the population requires the engagement of the global neonatal community – families, health care providers, academic scientists, regulators, pharmaceutical investigators, advocacy organizations and funders – to focus on the needs of the neonate by sharing their data, knowledge and expertise in order to advance medical innovation and regulatory science.

Need

With the collaboration of stakeholders within the neonatal community, practical tools can be developed and incorporated into clinical trials, which will then lead to more successful, efficient trials, providing this population with significantly increased and higher-quality treatments.

Objective & Specific Aims

Our mission is to communicate the work of C-Path's International Neonatal Consortium (INC) to the larger neonatal communities in support of a positive research culture and inclusivity of multiple stakeholder perspectives in the NICU.

Communicate INC progress within INC and to the larger neonatal community

Amplify and support the perspective of all stakeholders

Promote positive research culture for neonates as we address their unmet drug development needs

Measure, revise, refine and iterate

Communications Strategy

Develop key messages for the global neonatology community using the content of INC's impact from the perspective of each stakeholder group:

Stakeholders include:

- Parents
 - Advocacy groups
- Nurses
 - Societies/Professional Groups/Partners
- Neonatologists
 - Societies/Professional Groups/Partners
- Regulatory Agencies
- Industry Representatives

Key Messages for Stakeholders:

- NAESS
- Assessment of long-term neurodevelopmental outcome (LTO) following trials of medicinal products in newborn infants
- Recommendations for the design of therapeutic trials for neonatal Seizures

Target Audience: Global Neonatal Community

- **Parents**
 - NICU Parent Network (US-based)
 - EFCNI (EU-based)
 - Others, such as Irish Neonatal Health Alliance, Alliance for Black NICU Families and other smaller groups, but most fit under the other two umbrellas.
 - thezaky.com
- **Nurses**
 - COINN (LinkedIn, Facebook, Twitter)
 - NANN
 - AWHONN
 - ANN.Healty Newborn Network
 - Chifa Listerve

- ALIGNN
- **Neonatologists**
 - Neonatal research networks in different countries / regions.
 - NICHD, Neonatal Research Network
 - NICHD, Pediatric Trials Network
 - Vermont Oxford Network
 - EuroNeoNet: European Neonatal Network
 - EFCNI: European Foundation for the care of newborn infants
 - Society for Pediatric Research
 - European Society for Pediatric Research
 - iNEO: International Network evaluating Neonatal Outcomes
 - Australia-New Zealand Neonatal Network (ANZNN)
 - Canadian Neonatal Network (CNN)
 - Israeli Neonatal Network (INN)
 - Neonatal Research Network of Japan (NRNJ)
 - Swedish Neonatal Quality Register (SNQ)
 - UK Neonatal Collaborative (UKNC)
 - American Academy of Pediatrics, Section of Neonatal Perinatal Medicine (similar sections of other pediatric associations)
 - American Academy of Pediatrics, Section of Clinical Pharmacology and Therapeutics and Section on Advances in Therapeutics and Technology
- **Regulatory Agencies**
 - Registered Lobbyists US/EU
 - Pediatric Cluster (FDA/EMA)
- **Industry Representatives**
 - For trade associations with active pediatric work groups, send one pager to staffer who is point person for pediatric work group
 - BIO
 - EFPIA
 - For trade associations without pediatric working groups the approach would be ask if their members would like to self-select into an email distribution group for INC publication/project key message
 - PhRMA
 - IFPMA
 - JPPMA
- **Societies/Pro Groups/Partners**
 - American Society for Pharmacology and Experimental Therapeutics
 - American Society for Clinical Pharmacology & Therapeutics
 - Canadian Society for Pharmacology and Therapeutics

Communication Resources

Key Messages - Nurses

Neonatal Adverse Event Severity Scale (NAESS)

- Education for nurses caring for research patients on the use of the NAESS will lead to clear communication for adverse event (AE) identification and evaluation. (The NAESS implementation plan includes a training module.)
- Application of nurses' clinical expertise in AE identification and documentation is critical.
- The NAESS will support nurses to concurrently identify changes in baseline to better identify the occurrence and severity of AEs, thereby contributing to the overall safety of clinical care and trials.
- NAESS, when used consistently by all stakeholders, including nurses, will strengthen the research culture shared by the multidisciplinary team.

Long-term Outcomes

- Adverse effects/events may not be seen until months or years after a study making long-term follow up imperative.
- Nurses want to know that the care they provide is not only safe but also leads to improved outcomes.
- Nurses support long term follow up that is not burdensome to parents/families. Nurses are committed to addressing disparity issues as necessary to support follow up in all research participants.
- The tracking process or contact maintenance should be as time efficient and non-intrusive for nursing/coordinators and families as possible.

Neonatal Seizures

Nurses played a key role in the development and review of this [document](#), and nurses are often the initial members to recognize neonatal seizures, thus nurses support the following:

- Seizures in neonates present a significant burden with occurrence of seizures at about 3/1000 live births.

- Seizures in neonates have multiple etiologies making a single treatment less likely to be effective and must be considered in relationship to neurologic outcomes.
- Alternative trial designs that serve to answer the research question are preferred as these alternative designs will require the enrollment of fewer subjects reaching the outcome in a timely manner.
- Several specific challenges exist in researching anti-seizure drugs in neonates. While these challenges exist, they must be balanced with exposure to non-validated therapies.
- It is recognized that there are consent challenges to trials designed to study seizures in neonates. Nurses agree that parental consent is critical and support remote consenting that will accomplish timely enrollment while adequately informing parents.
- Nurses support avoiding unnecessary/excessive blood sampling in this population and support the use of non-invasive biomarkers to establish drug safety whenever possible
- Nurses support clear dosing administration guidelines and dose formulation as outlined in Appendix 2 of the [supplementary materials](#).

General Talking Points

International Neonatal Consortium

- In 2015, C-Path, launched the International Neonatal Consortium, INC, to bring together multidisciplinary stakeholders in a pre-competitive way to serve unmet drug development needs in neonates, with the common cause of developing safe and effective medical products for neonates.

- Critical Path Institute's International Neonatal Consortium, INC's, mission is to accelerate the development of safe and effective therapies for neonates.

Neonatal Adverse Event Severity Scale (NAESS)

- The Neonatal Adverse Event Severity Scale, NAESS, is the first neonatal-specific adverse event severity grading instrument.
- NAESS is the first tool to provide a standardized, infant-specific framework to consistently assess severity of the most commonly reported events experienced among critically ill infants.
- The NAESS is a valuable tool that can help inform pharmacovigilance reviews, pediatric safety reports, and benefit/risk assessments.
- NAESS mapping to MedDRA terms allows for standardized and consistent safety comparisons between medications and across trials throughout the world.
- The NAESS is designed to allow for revisions and expansion of terms as utilization increases and progress is made in systematizing the assessment of AEs in newborns.

Long-term Neurodevelopmental Outcomes (LTO)

- The benefits or adverse effects of investigational medicinal products may not appear until after a study's completion making long-term follow-up imperative. Nurses value the results of long-term outcome studies.
- Nurses support long-term follow-up studies that balance benefits, costs, and burden of specific assessments, particularly for the participants and their families.
- Maintaining participation throughout long-term follow-up is critical. Nurses support efforts to optimize retention and minimize disparities with drop-out over long-term studies, particularly among children with adverse outcomes and those from socially disadvantaged backgrounds.
- There are important benefits to long-term follow-up since the safety and efficacy of a drug or interventions may not be evident for many years.

- Suitable tracking and retention strategies are needed to ensure families are adequately informed of the study's expectations. Nurses could help families understand the importance of long-term follow-up assessments.

Design of Therapeutic Trials for Neonatal Seizures

- Seizures, one of the most common neurologic emergencies in neonates, are associated with significant mortality and neurodevelopmental disability. In fact, seizures are more common in neonates than any other age group.
- There is a critical need for safe and effective treatments for seizures in neonates.
- The INC publication, [Recommendations for the design of therapeutic trials for neonatal seizures](#), includes comprehensive recommendations for clinical trial design components for anti-seizure medications in neonates with valuable input from clinical care providers, researchers, parents, nurses, industry, and regulatory agencies. This coordinated approach of stakeholder input can encourage the development of medications that are effective to specifically treat neonatal seizures.
- New parents may be surprised to hear that there are very few clinical trials designed specifically for neonates and even fewer for neonatal seizures. Clinical trials for new anti-seizure medications are essential and NICU graduate parents provided important input.
- Parent's shared experiences and opinions regarding trial safety, long-term outcomes and caregiver burden were incorporated into each study recommendations.

FAQs

- Find FAQs on C-Path's INC website, <https://c-path.org/inc>

Social Media & Social Media Toolkits

- **C-Path Social Page Tags**
 - **LinkedIn**: @Critical Path Institute (C-Path) (auto populates)
 - **Facebook**: @Critical Path Institute (auto populates)
 - **Twitter**: @CPathInstitute

- **YouTube:** <https://www.youtube.com/c/CriticalPathInstitute>
- **Social Media Hashtags:** #CPath #INC #NAESS #longtermoutcomes #seizures #neonatal #neonatology #nicu #preemie #premature #healthcare #neonatologist #collaboration #pediatric #clinicaltrials #consortium #globalhealth

Email Campaigns

Example emails would go out to INC members and INC master stakeholder list. The call to action (CTA) to stakeholder groups is that they share it with their networks, but for ease this would be one message that fits all.

EXAMPLE

As a **[stakeholder group]** member, working with the [Critical Path Institute's International Neonatal Consortium](#) (a global collaboration formed to forge a predictable regulatory path for evaluating the safety and effectiveness of therapies for neonates), **[I/we]** would like **[you/organization name]** to be aware of resources developed by INC to support the development of therapies for neonates.

Linked please find the recently published [Neonatal Adverse Event Severity Scale](#) paper additional resources to help amplify our message, including social media toolkits at c-path.org/inc/resources.

*If possible, please cascade to your **[network/members]** that would also be interested in this information, as applicable. If distribution is prohibited, please consider querying your membership for their interest to opt-in to an email distribution list, to be used by INC to distribute relevant industry papers and high-level message summaries regarding development of neonatal therapies as they become available.*

Please contact the INC team at incinfo@c-path.org, if you have questions.

*Kind regards,
Mary Short*

One Sheets

- [INC One Sheet](#)

CRITICAL PATH INSTITUTE

INTERNATIONAL NEONATAL CONSORTIUM'S IMPACT ON DRUG DEVELOPMENT

Critical Path Institute's International Neonatal Consortium (INC)

- A global network of neonatal clinical trial investigators, clinicians, regulators, and industry partners
- Addressing neonatal drug development challenges
- Overcoming barriers to neonatal drug development
- Improving neonatal drug development outcomes

INC's Impact on Drug Development

- Improved neonatal drug development outcomes
- Increased neonatal drug development funding
- Improved neonatal drug development regulatory pathways
- Improved neonatal drug development clinical trial outcomes

IMPROVING NEONATAL DRUG DEVELOPMENT SOLUTIONS

- Addressing neonatal drug development challenges
- Improving neonatal drug development outcomes
- Increasing neonatal drug development funding
- Improving neonatal drug development regulatory pathways
- Improving neonatal drug development clinical trial outcomes

REAL WORLD DATA ANALYTICS PLATFORM

- Addressing neonatal drug development challenges
- Improving neonatal drug development outcomes
- Increasing neonatal drug development funding
- Improving neonatal drug development regulatory pathways
- Improving neonatal drug development clinical trial outcomes

● [INC NAESS One Sheet](#)

NEONATAL ADVERSE EVENT SEVERITY SCALE (NAESS)

INC
INTERNATIONAL
NEONATAL CONSORTIUM
CRITICAL PATH INSTITUTE

NAESS is the 1st neonatal-specific AE severity grading instrument

- Infant SAFETY is important to all stakeholders in clinical research**
- Developed with input from parents, nurses, physicians, & representatives from industry and regulatory agencies**
- Parents and nurses offer unique insight into infant's change in baseline**
- Can be used by local investigators, sponsors, and regulatory groups**
- Mapping to MedDRA and standard terminology supports regulatory processes**
- Can help inform pharmacovigilance reviews, pediatric safety reports, & benefit/risk assessment**
- Validation is ongoing. Education is needed for ALL stakeholders.**
- Help us make this an effective tool for adverse event reporting in trials that include neonates.**

Communications Timeline Planning & Measurement

Creating an Outreach Effort and Timeline for Messaging

The following table is a list to plot moments, events and ideas to track the people and places/events that can help us get the word out. Think about the next 12 months where as a group we can consider creating communications amplification opportunities:

Could the moment provide a good opportunity to reach our target audiences with a key message about INC?

Planning Tips:

- Review the opportunities table below
 - Are you attending/presenting at any of these events?
 - Is there awareness you can share with your networks around a particular event or awareness week, i.e., National Nurses Week, etc.
- Give yourself time to plan and select materials from the toolkit
- Focus on the opportunities that are a match for the stakeholder key message you are using
- Share your plans to use our toolkit materials with the INC Communications WG
- Track your communications here: bit.ly/plan_inc_comms

The opportunities below will help to inform a short term and then longer term communications plan for INC. If you have additional opportunities to add, you may do so [here](#).

Opportunities Table:

Date	Event	Organization	Location
SEPTEMBER 2021			

	<u>FDA Meetings, Conferences and Workshops</u>	FDA	
9/7-9	<u>Giving Voice to the Silent Burden: Maternal Mental Health Technical Consultation</u>	Healthy Newborn Network	Virtual event
9/8 -11	<u>Fall 2021 National Neonatal, Advanced Practice, & Mother Baby Nurses Conferences</u>	Academy of Neonatal Nursing	
9/11	<u>Virtual neonatal minicon</u>		Virtual event
9/ 10 - 11	<u>20th International Attachment Conference, virtual conference</u>		Virtual event
9/14	<u>4th Congress of joint European Neonatal Societies (jENS)</u>		Athens, Greece
9/13 - 19	<u>Neonatal Nurses Week</u>		
9/13 - 15	<u>NANN's VIRTUAL 37th Annual Conference</u>	NANN	Virtual event
9/14 - 18	<u>jENS 2021 congress</u>	ESPR	Virtual event
9/15 - 16	<u>Postpartum Hemorrhage CoP Virtual Annual Meeting</u>	Healthy Newborn Network	Virtual event
9/21 - 22	<u>Global Breastfeeding and Lactation Symposium</u>		
9/22	<u>Focus on Pharmacology Virtual Series</u>	ASPET	
9/24 - 25	<u>Unpacking the NICU Parent Leader Journey</u>	NICU Parent Network	Virtual event

9/28	<u>Strengthening capacity for health innovation in Africa</u>	H3D-F and IFPMA partnership	Virtual event
------	--	-----------------------------	---------------

OCTOBER 2021

	<u>Pediatric Academic Societies (PAS) Meeting</u>		
--	--	--	--

10/5 - 21	<u>2021 Newborn Screening Symposium</u>	Association of Public Health Laboratories	Virtual event
-----------	--	---	---------------

10/8 - 12	<u>AAP National Conference & Exhibition</u>	American Association of Pediatrics	Philadelphia, Pennsylvania
-----------	--	------------------------------------	----------------------------

10/9 - 13	<u>AWHONN convention</u>	AWHONN	Virtual event
-----------	---------------------------------	--------	---------------

10/18 - 19	<u>International Conference on Neonatology</u>		Paris, France
------------	---	--	---------------
